Application No.: 10/717,542 Docket No.: 8734.257 US

Amendment dated September 4, 2009

Response to Office Action dated June 8, 2009

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

List of Claims:

1. (Currently Amended) A dispenser for a liquid crystal display panel, comprising:

a substrate on which a plurality of image display parts is arranged in a plurality of columns and lines;

a table on which the substrate is loaded;

supports above the table, the number of supports corresponding to the number of column or line of image display parts; and

a plurality of syringes affixed at each supports support to dispense a material on the substrate, the number of the syringe of support being same as to the number of the image display parts in the corresponding column or line, the radius of the syringe being larger than the distance between the dispensing start points of the neighboring image display parts,

wherein the supports are independently driven from each other so that the syringe dispense dispensing material in only one image display part,

wherein the syringes at one support dispense the material on the odd image display parts and then the syringes at the support dispense the material on the even image display parts after shifting the syringe.

- 2. (Original) The dispenser of claim 1, wherein the substrate has at least one thin film transistor array substrate formed on the substrate.
- 3. (Original) The dispenser of claim 1, wherein the substrate has at least one color filter substrate formed on the substrate.
 - 4. (Cancelled)
- 5. (Original) The dispenser of claim 1, wherein the table is moved in forward/backward and left/right directions.

Application No.: 10/717,542 Docket No.: 8734.257 US

Amendment dated September 4, 2009

Response to Office Action dated June 8, 2009

6. (Original) The dispenser of claim 1, wherein the material is a sealant to form a seal pattern.

- 7. (Original) The dispenser of claim 6, wherein the sealant is formed on the substrate and a portion of the seal pattern is open.
- 8. (Original) The dispenser of claim 6, wherein the sealant is formed on the substrate and the seal pattern is a closed pattern encompassing an outer edge of the image display parts.
- 9. (Original) The dispenser of claim 1, wherein the material is one of liquid crystal and Silver (Ag).

10. (Cancelled)

- 11. (Previously Presented) The dispenser of claim 1, wherein the number of the plurality of syringes at supports corresponds to the number of image display parts in one column of image display parts.
- 12. (Previously Presented) The dispenser of claim 1, wherein the number of the plurality of syringes at supports corresponds to at least some of the image display parts in one column of image display parts.

13-14. (Cancelled)

and

15. (Withdrawn) A dispensing method for a liquid crystal display panel, comprising:

aligning and affixing a first predetermined number of syringes on a first support; aligning and affixing a second predetermined number of syringes on a second support; loading a substrate having a plurality of image display parts formed thereon onto a table;

dispensing material onto the substrate through the first predetermined number of syringes for image display parts in a first column on the substrate and through the second predetermined Application No.: 10/717,542 Docket No.: 8734.257 US

Amendment dated September 4, 2009

and

Response to Office Action dated June 8, 2009

number of syringes for image display parts in a first column on the substrate.

16. (Withdrawn) The method of claim 15, wherein the material is one of a sealant, liquid crystal and Silver (Ag).

17. (Withdrawn) A dispensing method for a liquid crystal display panel, comprising:

aligning and affixing a first predetermined number of syringes on a first support; aligning and affixing a second predetermined number of syringes on a second support; loading a substrate having a plurality of image display parts formed thereon onto a table;

dispensing material onto the substrate through the first predetermined number of syringes for image display parts in a first column on the substrate and through the second predetermined number of syringes for image display parts in a second column on the substrate.

- 18. (Withdrawn) The method of claim 17, wherein the material is one of a sealant, liquid crystal and Silver (Ag).
- 19. (Withdrawn) A dispensing method for a liquid crystal display panel, comprising:

affixing and aligning a plurality of syringes on first and second supports;

loading a substrate with first and second image display parts formed thereon on a table;

forming first seal patterns along each outer edge of the first image display parts by using syringes of the first support; and

forming second seal patterns along each outer edge of the second image display parts by using syringes of the second support.

- 20. (Withdrawn) The method of claim 19, wherein the first and second image display parts have different sizes.
- 21. (Previously Presented) The dispenser of claim 1, wherein the image display parts are at least two different sizes.
